

KEEL Mfg. UPDATE

ICBO APPROVED

The International Conference of Building Officials (ICBO) has approved KEELGRID[®] in **Evaluation Report Number 5376**. The report is scheduled for publication in January 1998. With the ICBO approval and a seismic installation, KEELGRID[®] is approved for use in seismic zone up to and including zone 4. The approval will provide much assurance to end-users and architects regardless of seismic zone.

Seismic zones for the US are shown on the back of this page. Check with local authorities for the final judgment on zone classifications. Zones are 0, 1, 2A, 2B, 3, and 4. For the higher zones, the splice, cross tee, and lock clips have to be pop riveted. Our Seismic supplement for the installation guide is included in this mailing.

Sweet's Product Line:

KEELGRID[®] is scheduled to appear in the Dec/Jan issue of Sweet's Product Line. This issue is a General Building and Renovation issue. Copy for this issue had gone to press before we received notice of the ICBO approval. We do plan have a similar advertisement in the next similar issue of Product Line.
